### Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of the fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is a risk free investment.
- This share class has been classed as 3 because its volatility has been measured as below average.
- The risk and reward score is not guaranteed and may change over time.
- The Fund may invest in higher risk bonds which have a greater risk of default than lower risk bonds.
- Fund's Net Asset Value will rise (or fall) in value based on the market value of the bonds held. Factors which influence the market price of the bonds include GBP interest rates, global credit market conditions and individual issuer creditworthiness.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this Fund.
- The Fund is suitable for investors with a medium to long term holding period and who have a low to moderate risk appetite.
- There can be no assurance that the investment objective and policy of the Fund will be achieved.
